

Prevident[®]

Prevident[®] is a prescription fluoride indicated for ***once daily topical use, preferably at bedtime***. It is well established that sodium fluoride is safe and extraordinarily effective as cavity prevention when applied properly and frequently.

As part of Chestnut Dentals' preventive program we are recommending Prevident[®] to our patients who have a high cavity rate. It is also a valuable addition to orthodontic treatment since it can decrease the risk of decalcification/white spots around the braces.

Use in pediatric patients requires special adult supervision to prevent ingestion of excessive amounts of fluoride. ***Treat Prevident[®] like any other prescription medication and keep it out of the reach of infants and children.***
