

Prescribed Oral Health Rinses

Periogard or Peridex:

These are prescription medications. Please keep safely out of the reach of children! Swish with 0.5 (1/2) ounces for thirty (30) seconds and avoid rinsing with water for 15 - 30 minutes thereafter. This should be done in the morning following breakfast and just before bedtime. If a Fluoride rinse is recommended, please use the Fluoride at a different time of day, i.e. not in conjunction with PerioGard or Peridex.

Remember:

PerioGard or Peridex can cause some increased staining of teeth. Thus, adequate brushing and flossing is a must! Also, some slight alteration in taste may occur.
