## PCL and PLC RECONSTRUCTION REHABILITATION PROTOCOL

|                                       | WEIGHT<br>BEARING   | BRACE   | ROM  | THERAPEUTIC<br>EXERCISES   |
|---------------------------------------|---|---|--|--|
| PHASE I<br>0 - 3 weeks                | Non - weight<br>bearing   | Locked in full extension  | None   | Quad sets, ankle pumps, SLR, hip ab/<br>adduction, hamstring/calf stretch, calf<br>press with theraband, patellar mobilization   |
| 3 - 6 weeks                           | Non - weight<br>bearing   | <b>3 - 6 weeks</b> : locked in full extension for ambulation - removed for exercise                   | passive only**<br>to tolerance<br>0 to 70 degrees        | Add chair slides, passive ROM in prone position  |
| PHASE II<br>6 - 12 weeks<br>PHASE III | Weeks 6 - 10:<br>Progress 25% per<br>week until full<br>weight bearing at 10<br>weeks | <b>6-10 weeks</b> : unlocked for<br>all activities<br><b>10 weeks - 4 mo:</b> Varus<br>unloader brace | Maintain full<br>extension and<br>progressive<br>flexion | <ul> <li>6-8 weeks: gait training, wall slides, mini-squats, resisted hip exercises in standing***</li> <li>8-12 weeks: stationary bike with light resistance (to begin) and seat higher than normal, closed chain terminal knee extensions, Stairmaster, balance and propriception activities, leg press (limiting knee flexion to 90 %)</li> </ul> |
| 12 weeks -<br>4 months                | Full, without use<br>of crutches and<br>with a normalized<br>gait pattern             | Varus unloader brace  | Gain full and pain-free                                  | Advance closed chain strengthening,<br>progress proprioception and balance<br>activities, maintain flexibility   |
| 4 mo - 7 mo<br>PHASE IV               | Full  | None  | Full   | Treadmill walking, advance to jog<br>Add hamstring curls for strengthening   |
| 7 months<br>and beyond                | Full  | None  | Full and pain-free                                       | Maintain strength, endurance, and<br>function, begin sport-specific functional<br>progression (backward running, cutting,<br>grapevine, etc.), progress to running,<br>initiate a plyometric program<br>Return to sports with PCL brace until<br>1 year post-op  |

\*\*Maintain anterior pressure on proximal tibia as knee is flexed - prevent posterior sagging at all times \*\*\*Resistance must be proximal to knee with hip ab/adduction exercises
