

Forecast for '24

Long Island leaders reveal their predictions for the year ahead

Navin Arora
Dermatologist and Founder
Borealis Dermatology

In 2024, the field of dermatology will see remarkable progress and positive transformation. Advancements in technology will continue to revolutionize diagnostics, treatments and newly approved FDA medications. The emergence and growth of AI-powered tools and telemedicine will enhance dermatological care, making treatments and access to care more personalized. Breakthroughs in biological therapies will significantly impact conditions like psoriasis, eczema and skin cancers, offering more effective and targeted treatments. Ongoing research and advancements will assist members of my profession and allow us to provide more positive outcomes for patients. Additionally, global health initiatives aimed at improving skin care for underserved members of the community will continue to gain traction.

We're seeing a strong demand for cosmetic dermatology treatments and services. New technology is allowing for safer and more advanced procedures which is attracting a greater number of individuals who are seeking non-invasive aesthetic enhancements. A heightened awareness on preventive skincare will drive regular dermatological check-ups and early interventions for skin cancer and other illnesses, promoting overall health and well-being. Collaborations between dermatology and other specialties will foster multidisciplinary approaches to treat complex skin conditions.

Overall, in 2024 we will experience a dynamic era in dermatology, marked by technological innovation, personalized care and a deeper understanding of skin health for better patient outcomes.
