

## Acupuncture with Resonance

This form of acupuncture uses sound frequencies to help stimulate the target tissue.

### How does Acupuncture with Resonance work?

Acupuncture needles are resonated with certain vibrations, or frequencies of sound. These sound frequencies are created by a frequency generator at specific hertz ideal for your condition and pass through the acupuncture needles like little antenna, amplifying the healing power of the points. Atoms of different materials all resonate at different frequencies, which is why a skilled singer can shatter a glass by singing the correct note. Similarly, tuning forks in a room will sympathetically resonate if one of the same frequency is played. This principle can be used for the health of our bodies, as well. Each type of cell in our body resonates at certain frequencies depending on if the tissue is bone, muscle, blood, lymph, etc. or healthy or diseased.

By resonating the target tissue with these specific frequencies we are able to have a greater affect on the entire system; decreasing inflammation, improving blood circulation, and stimulating energy meridians.

Frequency medicine has been used since ancient times and is recently beginning to gain scientific-backed support.

### Clinically Proven Benefits

- Relieves pain
- Reduces inflammation
- Promotes healing
- Increases blood flow

### Symptoms Addressed

- Anxiety
- Depression
- Headache/migraine
- Vestibular dysfunction
- Sensory processing delays
- Emotional traumas
- Musculoskeletal pain/soreness
- Immune dysfunction
- GI dysfunction
- Visceral dysfunctions (liver, kidney, lungs, heart)
