

AXON PROCESS ROADMAP

The initial patient process is important for determining correct treatment plan, frequency, intensity, and duration of care. Having a comprehensive understanding of each other (clinic and patient) through this process will lead to better understanding, education, and outcomes.

Discovery Call

Before starting any patient journey, it's crucial to conduct market research to understand your goals, options, and if we can help you.

01

Initial Exam, Assessment & Plan

Determining the functional capacity of your Brain Body Mind systems and putting together a plan to address all facets of your health.

02

Diagnostics & Review of Findings

Getting into the comprehensive data through neurological diagnostics, brain maps, blood and specialty labs, imagining. Then putting it all together for you to understand.

03

Treatment

Treatment is curated from all of that information into a plan just for you. Supporting your neurology, body, metabolic systems, gut health, and mindset. We reassess every 10 visits to ensure we're on the right path, adapting when needed.
